

As a provider of the latest technology in fire detection, Zettler has now added an augmented reality feature to its Zettler Roadshow Truck.

The new AR feature gives customers the opportunity to see Zettler products in a real life environment. Customers can take a 360° tour of a hotel, which has the latest Zettler products installed throughout. The experience is easily accessed using one of the ipads supplied on the truck with the pre-loaded app opened. Simply hold the ipad up to one of the AR markers and into the hotel you go.

During the tour, customers can use the animated icons, to explore the hotel lobby, bedrooms and corridors and learn how our latest technology is used to protect the environment.

The Zettler Roadshow Truck is fitted with state-of-the-art fire detection products from the Zettler portfolio, including the PROFILE panel, our generation 6 detectors sounders, beacons and call points. The truck travels through Europe to trade shows and customers events giving customers the opportunity to learn more about the ZETTTLER range of products from our experts and get 'hands on' experience with the products during live demonstrations.

Using the iPad customers can move around to explore the lobby area, corridor and hotel bedroom. Each time customers see a blue bubble, they can click on it and it will take them to another part of the hotel.

Products featured within the AR include:

- // Profile
- // Gen 6 detectors
- // Sounders
- // Beacons
- // Callpoints
