

Since the successful launch of the PROFILE control panel range in August 2014, Tyco Fire Protection Products have been collecting feedback from sellers, installers and end users to continuously improve the panel's functionality in line with the needs of its customers. The results of this feedback are the release of new GUI firmware and Consys configuration software.

The new firmware and software provide enhanced usability of the panels Graphical User Interface (GUI). Scrolling and selecting on the GUI is smoother and more responsive, not only making the panel more efficient to use but also creating a more satisfying user experience.

Another major benefit brought to customers is the ability to perform "front panel updates". Technicians and trained users can now make minor changes to the system directly from the GUI. This includes the modification of point detector text descriptions and changing the operating mode of detectors. No additional hardware, software or computer connection is required, as there is no need to download the system configuration. This significantly speeds up and simplifies the execution of small changes to the system configuration.

The report produced from the system status screen has been improved and can be displayed on the GUI. It now displays all the analogue values reported by the detectors. This gives the operator a valuable snapshot indication of each point detector's current state including the DDM800 4-20mA interface, which will now display values in any unit that has been configured e.g. "% of lower explosive limit" for a gas detector.

Additionally, the operation of the USB interface for downloads has been optimised and a number of minor improvements that were requested have been implemented. Finally the number of supported languages has been increased with the addition of Flemish and Traditional Chinese. Below is the full list of supported languages.

- Czech
- Danish
- Dutch
- Finnish
- Flemish
- French
- German
- Italian
- Norwegian
- Polish
- Spanish
- Swedish
- Traditional Chinese
- Turkish
