

Following success in EMEA, Tyco Fire Protection Products is pleased to announce the launch of the ZETTLER PROFILE panel and repeaters in the APAC Region from October.

Commenting on the launch, Geoff Fiala (Product Management Director, Detection, Asia Pacific) said “The launch of PROFILE in APAC is a very important step in our product development roadmap, since we are now in a position to offer a complete state-of-the-art and competitive panel range. This will enable us to further establish ZETTLER as a leading technology brand, to drive and improve specification opportunities and to shape the fire detection markets in Europe, Middle East and now the Asia Pacific Region.”

The ZETTLER PROFILE panel is a powerful fire detection and alarm system with digital touchscreen that uses MZX Technology at its heart and provides significant advantages and new features compared to the existing MZX fire panels. Originally launched in Europe in 2014, PROFILE has grown from strength to strength and has already been installed in a variety of world class museums, banks, manufacturing facilities, universities and public buildings. The range includes Fire Panels from 1-8 loops and a new Touch Screen User Interface with different mounting options.

The new ZETTLER PROFILE portfolio provides significant advantages and new features compared to the existing MZX fire panels including a New User Touchscreen Interface.

#### Advanced usability:

- Intelligent User Guidance - Specially developed for Touch screen, not just an adaption of existing Interface
- 8.4" TFT colour touch screen
- Multilingual user interface
- Ergonomic icon display
- Touch sensitive status LED's provide event summary information
- Context sensitive help and on screen operator instructions:
- Info-Button – Intelligent navigation for operators
- User configurable screen site maps - no need for additional site plans

## ZETTLER PROFILE Launched in Asia Pacific Region

### **Aesthetics:**

- Modern colour touch screen
- Different mounting options
- State of the art design to use in reception areas and prestige building environments
- Customizable graphic on User Interface
- Branding opportunity

### **Reduced lifetime cost:**

- 2000 loop points per panel to increase scalability with reduced system costs
- Fully backwards compatible with current MZX panel range – cost effective upgrade
- IP Connectivity/Ethernet - more flexibility in system design
- Improved efficiency through ease of use

### **Easy to install, configure and service:**

- USB Configuration/USB Firmware Upload/Download
- Saves time and cost during installation and service
- Is much easier and quicker than serial ports
- Future proof interface
- Comprehensive point management and disable functions
- Download the extensive 10,000 event log via USB – easy diagnostics using dynamic filters – print/analyze information
- Keyless log-on using RFID tags – easy identification and log of user actions
