

**Johnson Controls is now SASA's choice for fire detection and extinguishing systems. Based in Adana, Turkey, the partnership began last year to support SASA mask production for the health sector in Turkey during COVID-19.**

SASA is a world leading manufacturer of polyester, fiber, filament, polyester-based polymers, intermediates and specialty products. It provides nearly 70 percent of the 700,000 tons of polyester produced annually to the health, hygiene and medical packaging sector in Turkey.

Due to COVID-19, a shortage of materials to manufacture masks became an issue. SASA assigned a significant portion of its products to the health sector in Turkey, and its production will increase with the new Johnson Controls partnership.

Systems that support this partnership so far include ZETTLER PROFILE Flexible panels, 6<sup>th</sup> Generation Detectors, Beam Detectors, FlameVision Detectors and Linear Heat Detectors.

Our field teams continue to provide supervision services by taking all necessary precautions within the framework of the Johnson Controls Zero Harm policy.
