

**The recent release of EN54-23, by the European Committee for Standardization (CEN), clarifies the use of Visual Alarm Devices in fire detection and alarm systems for non-domestic premises.**

EN54-23 provides clarity by standardising requirements, test methods and performance criteria of Visual Alarm Devices and ensures all device parameters are measured in a uniform manner throughout Europe. Prior to this release, misinterpretation and confusion over a particular product's performance was a common concern in the industry as there was no EN standard in existence for VADs.

*"Since January 2014, the installation of Visual Alarm Devices has been mandatory, and with the introduction of the EN54-23 standard their use has grown considerably"* Says Peter Hauser, Senior Global Product Manager, Fire Detection from Johnson Controls
